

EWCPs 2019

European Winter Conference on Plasma Spectrochemistry

From February 2, 2019 to February 7, 2019

EWCPs 2019 is the 18th in a series of European biennial meetings featuring developments in chemical analysis employing electrical discharge sources known as "plasma spectrochemistry". It explores the most recent applications, developments, fundamentals, and research achieved with analytical plasma sources including glow discharges, inductively coupled plasmas, laser sources, and microwave discharges for elemental trace and ultra-trace, stable isotope, and elemental speciation analyses. The attendance usually exceeds 500 international scientists. The scientific programme is accompanied by an exhibition with the participation of more than 40 instrumental manufacturers. It is the third time that the meeting is chaired by IPREM members (the 8th EWCPs was organized in 1999 by Olivier Donard in Pau and the 15th EWCPs was organized in 2013 by Joanna Szpunar in Cracow).
